

Beginner Level

1. List me 10 numbers lo aur unka sum nikalo.
 2. List me sabse bada number find karo.
 3. List me sabse chhota number find karo.
 4. List ka average nikalo.
 5. Count karo ki list me kitne even aur kitne odd numbers hain.
 6. List ko reverse karo (without reverse()).
 7. List ke sabhi elements print karo ek-ek line me.
 8. List me kisi given number ko search karo.
 9. List me negative numbers count karo.
 10. List ke sabhi elements ka square bana kar new list me store karo.
-

Intermediate Level

11. List se duplicate elements remove karo.

Example:

[1,2,2,3,4,4,5]

Output:

[1,2,3,4,5]

12. Second largest element find karo.
13. Second smallest element find karo.
14. List ko ascending order me sort karo (without sort()).
15. List ko descending order me sort karo.
16. List me frequency count karo.

Example:

[1,2,2,3,3,3]

Output:

1 -> 1
2 -> 2
3 -> 3

17. Do lists ko merge karo.

18. Check karo ki list palindrome hai ya nahi.

Example:

[1,2,3,2,1]

19. List me unique elements print karo.

20. List ko left rotate karo 1 position.

Example:

[1,2,3,4,5]

Output:

[2,3,4,5,1]

Advanced Level

21. Right rotate list by k positions.

22. List me missing number find karo.

Example:

[1,2,3,5]

Output:

4

23. Two lists common elements find karo.

Example:

[1,2,3,4]

[3,4,5,6]

Output:

[3,4]

24. Two lists union find karo.

25. List me pair find karo jinka sum given target ke equal ho.

Example:

[2,7,11,15]

target = 9

Output:

(2,7)

26. List ko manually sort karo using Bubble Sort.

27. List ko manually sort karo using Selection Sort.

28. List me largest consecutive sequence length find karo.

Example:

[100,4,200,1,3,2]

Output:

4

(1,2,3,4)

29. Matrix (2D list) ke sabhi elements ka sum nikalo.

Example:

```
[  
  [1,2,3],  
  [4,5,6],  
  [7,8,9]  
]
```

30. Matrix transpose karo.

Interview Style Problems

31. Move all zeros to end.

Example:

[1,0,2,0,3,0,4]

Output:

[1,2,3,4,0,0,0]

32. Find majority element.

33. Find first non-repeating element.

34. Find all duplicates.

35. Check whether two lists are anagrams of each other.

- 36. Merge two sorted lists.
- 37. Remove all occurrences of a given element.
- 38. Find kth largest element.
- 39. Split list into even and odd lists.
- 40. Flatten a nested list.

Example:

[[1,2],[3,4],[5,6]]

Output:

[1,2,3,4,5,6]
