

Basic Level

1. Create a tuple with 10 integers and print it.
 2. Write a program to find the **length of a tuple** without using `len()`.
 3. Access the **first, middle, and last element** of a tuple.
 4. Write a program to check if an element exists in a tuple.
 5. Convert a list into a tuple and print it.
-

Intermediate Level

6. Find the **maximum and minimum element** in a tuple without using `max()` and `min()`.
 7. Count how many times a given element appears in a tuple without using `.count()`.
 8. Write a program to **reverse a tuple** without using slicing (`[::-1]`).
 9. Remove duplicate elements from a tuple and return a new tuple.
 10. Convert a tuple of numbers into a tuple of their squares.
-

Advanced Level

11. Write a program to find the **second largest element** in a tuple.
 12. Given a tuple of tuples (nested tuple), flatten it into a single tuple.
 13. Swap first and last elements of a tuple.
 14. Check if two tuples are **anagrams (contain same elements, any order)**.
 15. Find the index of a given element without using `.index()`.
-

Challenge Problems

16. Rotate a tuple to the right by k steps.
 17. Split a tuple into two halves.
 18. Merge two tuples and sort the result (without converting to list if possible).
-
